

ABSTRACT OF THE INVENTION

SJD
D8
BY

5 A spindle or worm drive for adjusting devices, especially
seat adjustment devices, window lifters and sliding roofs, in
motor vehicles. The drive includes a fixed spindle or
relatively fixed toothed rack which is secured to the second
of the two parts. The gear elements are mounted in a housing
which includes at least two plates that can be secured to each
other by plug-type connectors. The connectors are also
10 configured as supporting joints that absorb the forces of the
gear.
